Essential Parts of the System Unit

Motherboard

**Processor/Central
Processing Unit
(CPU)**

Power Supply

**Hard Disk
Drive**

**Solid State
Drive**

Essential Parts of the System Unit

MOTHERBOARD

- The main circuit board of the computer.
- Connects all parts together (CPU, RAM, storage, GPU, etc.) so they can communicate.

CENTRAL PROCESSING UNIT (CPU)

- Known as the “brain” of the computer.
- Performs all instructions, calculations, and decision-making processes.

POWER SUPPLY UNIT

- Converts electricity from the outlet into the proper voltage for the computer's components.
- Distributes power safely to the motherboard, drives, and other parts.

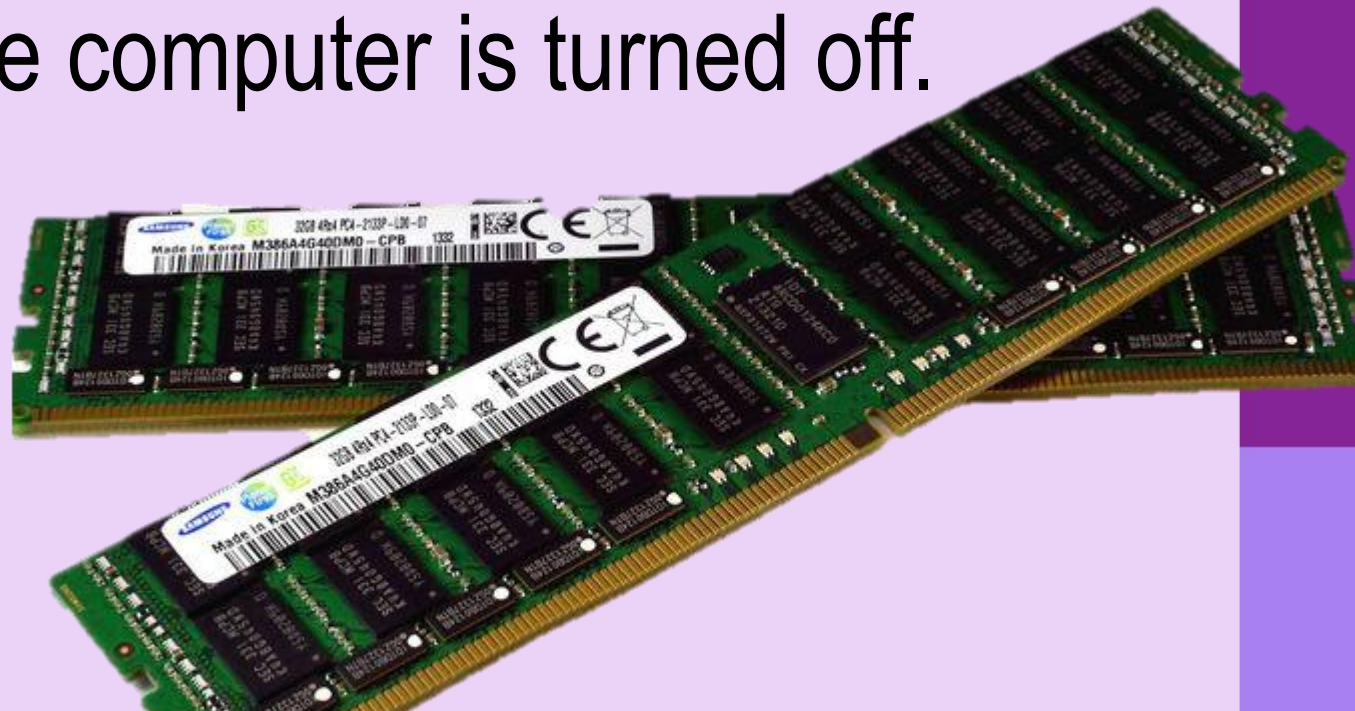

STORAGE DEVICES

- Hard Disk Drive (HDD):
Traditional storage with larger capacity but slower.
- Solid State Drive (SSD): Faster storage, no moving parts, commonly used today.
- Stores operating system, software, and user files permanently.

RANDOM ACCESS MEMORY (RAM)

- The computer's **short-term memory**.
- Stores data temporarily while the computer is in use (faster than storage drives).
- Data is erased when the computer is turned off.

RANDOM ACCESS MEMORY (RAM)

- Prevents overheating of the CPU and other components.
- Includes fans, vents, and sometimes liquid cooling systems.

CASING (CHASSIS/TOWER)

- The outer shell that houses all internal components.
- Protects parts from damage, dust, and helps manage airflow and cooling.

OPTICAL DRIVE

- Reads and writes data to discs (less common today).

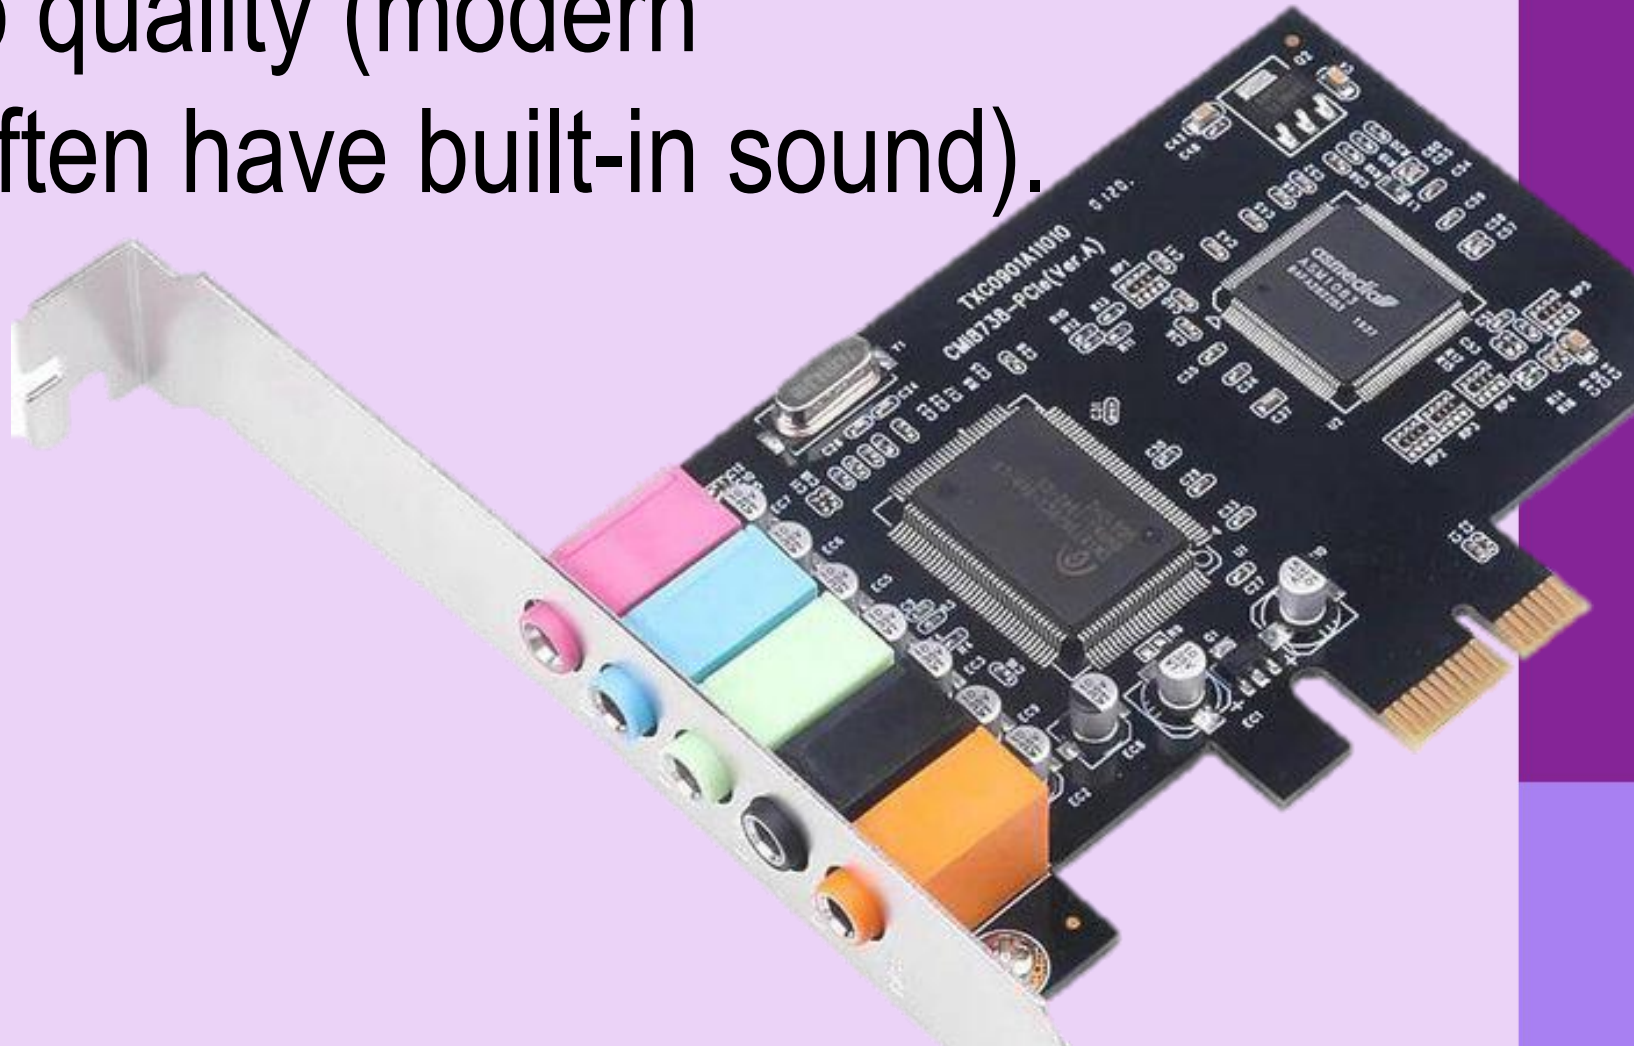

GRAPHICS PROCESSING UNIT/VIDEO CARD

- Handles visual display and graphics.
- Essential for gaming, video editing, and design.

SOUND CARD

- Enhances audio quality (modern motherboards often have built-in sound).

NIC/LAN CARD/WIFI CARD

- Network Interface Card (NIC / LAN Card / Wi-Fi Card)
- Connects the computer to wired or wireless networks.

THANK YOU!
