

APPLICATION OF COMPUTERS IN DIFFERENT FIELDS

JOMER O. CASABUENA

*Faculty, College of Arts and Sciences
Central Bicol State University of Agriculture*

BUSINESS

- Faster transactions
- Better data management and decision-making
- Job losses due to automation

BANKING

- Safer, faster online services (ATMs, e-banking)
- Risk of hacking, fraud, and cybercrime

INSURANCE

- Accurate client records and policy tracking
- Faster claims processing
- Privacy risks if data is leaked

EDUCATION

- Access to e-learning and digital resources
- Supports teaching and learning
- Can cause distraction and overdependence

MARKETING

- Wider reach through digital ads and online shopping
- Data-driven promotions
- Fake ads and scams are possible

HEALTHCARE

- Better diagnosis and patient care
- Electronic health records and advanced machines
- High costs and data security concerns

ENGINEERING

- Efficient, accurate CAD designs (2D & 3D)
- Reduces need for manual drafting jobs

MILITARY

- Advanced weapons and communication systems
- Improved planning and operations
- Higher risk of cyberwarfare

COMMUNICATION

- Instant global connections (email, chat, video calls)
- Cheaper communication
- Can spread misinformation, reduce face-to-face interaction

GOVERNMENT

- Easier public services (tax, census, forecasting)
- Faster data processing and record-keeping
- Vulnerable to system failures and cyberattacks

Activity (Essay)

“As a future Agricultural and Biosystems Engineer, how can you apply computers in improving agricultural productivity and sustainability (e.g., precision farming, irrigation systems, crop monitoring, or engineering design)? Provide at least two examples and explain their impact on farmers and the community.”

SHORT ESSAY GRADING CRITERIA

CRITERIA	POINTS
Content Accuracy	15
Organization	10
Relevant Examples	15
Clarity and Language	5
Grammar and Mechanics	5
TOTAL	50 pts.

THANK YOU!
